Subject: ISU 2006 waste summary

Hi Tricia,
Attached is a 2006 summary of RCRA waste generated at ISU. 2006 was unique because ISU sandblasted the lead based paint off a railroad bridge that bisects campus. The bridge is owned and operated by the Union Pacific Railroad, but on ISU property. It is open for debate if this waste "belongs" to ISU, so I included figures with and without the sandblasting waste. You will note that without the railroad project, about 86% of our waste came from academic sources. This would include research labs, teaching labs and art studios. The number without the railroad sand blasting is very consistent with previous years.
If you have questions, please let me know. I'm also interested to hear if this is in a format that is meaningful to you. If so, I'll give it to other schools as an example of how to present the data.
Bill
