NHTSA 02-11419-3828

Dear National Highway Traffic Safety Administration,

I am writing to you regarding DOT Docket (NHTSA 02-11419). I urge you to dramatically increase the proposed fuel economy standards for light trucks and SUVs.

As you know, fuel economy standards for light trucks and SUVs have remained at a mere 20.7 miles per gallon (mpg) since 1996. The Bush administration has finally proposed an increase, but it is extremely disappointing: a mere 1.5 mpg. Even worse, the auto industry has been given until 2007 to meet this paltry goal.

The administration suggests this is the best industry can do, yet it is less than what automakers themselves have proposed doing, and is dramatically less than what can be achieved with readily available technologies. A significant increase in the fuel efficiency of gas-guzzling vehicles will not only limit our dangerous dependence on Middle East oil, but also help reduce global warming.

Therefore, I urge you to propose tougher rules to raise fuel economy standards to more than 40 mpg for all passenger vehicles, including pick-up trucks and sport utility vehicles. Please tell me how you intend to address this important issue.

Sincerely,

Connie Chambers

Washington, DC 20590

Dear National Highway Traffic Safety Administration,

I am writing to you regarding DOT Docket (NHTSA 02-11419). I urge you to dramatically increase the proposed fuel economy standards for light trucks and SUVs.

As you know, fuel economy standards for light trucks and SUVs have remained at a mere 20.7 miles per gallon (mpg) since 1996. The Bush administration has finally proposed an increase, but it is extremely disappointing: a mere 1.5 mpg. Even worse, the auto industry has been given until 2007 to meet this paltry goal.

The administration suggests this is the best industry can do, yet it is less than what automakers themselves have proposed doing, and is dramatically less than what can be achieved with readily available technologies. A significant increase in the fuel efficiency of gas-guzzling vehicles will not only limit our dangerous dependence on Middle East oil, but also help reduce global warming.

Therefore, I urge you to propose tougher rules to raise fuel economy standards to more than 40 mpg for all passenger vehicles, including pick-up trucks and sport utility vehicles. Please tell me how you intend to address this important issue.

Sincerely,

R Mckenna Brown

Washington, DC 20590

Dear National Highway Traffic Safety Administration,

I am writing to you regarding DOT Docket (NHTSA 02-11419). I urge you to dramatically increase the proposed fuel economy standards for light trucks and SUVs.

As you know, fuel economy standards for light trucks and SUVs have remained at a mere 20.7 miles per gallon (mpg) since 1996. The Bush administration has finally proposed an increase, but it is extremely disappointing: a mere 1.5 mpg. Even worse, the auto industry has been given until 2007 to meet this paltry goal.

The administration suggests this is the best industry can do, yet it is less than what automakers themselves have proposed doing, and is dramatically less than what can be achieved with readily available technologies. A significant increase in the fuel efficiency of gas-guzzling vehicles will not only limit our dangerous dependence on Middle East oil, but also help reduce global warming.

Therefore, I urge you to propose tougher rules to raise fuel economy standards to more than 40 mpg for all passenger vehicles, including pick-up trucks and sport utility vehicles. Please tell me how you intend to address this important issue.

Sincerely,

Jessica Yates
