Subject Docket ID No. EPA-HQ-OAR-2008-0380

Dear Administrator Johnson,

The poultry industry desperately needs relief from soaring corn feed prices, and reducing the RFS mandate for corn-based ethanol will help achieve this goal. It is impossible for poultry producers to keep up with the inflated prices of corn feed, and as a result we are being forced to shut down plants and lay off workers.

Corn-based ethanol has unintended negative consequences for the environment and water conservation. A typical ethanol factory that produces 50 million gallons of biofuels a year will need about 500 gallons of water a minute. This places an incredible strain on our natural resources and raises serious questions about ethanol's sustainability.

Though ethanol has many negative effects, food prices have the most direct impact on Americans. Some estimate that increased biofuel demand accounts for 39% of the increase in corn prices, 21% of the increase in rice prices and 22% of the increase in wheat prices.

The effects of U.S. ethanol mandates are felt across the globe, resulting in rising prices for corn, grains, and other crops. Grains account for over 50% of the diet in some of the poorest countries in the world and the rising cost of food is detrimental to these countries. These rising food prices threaten disaster for the 160 million people worldwide who survive on less than fifty cents a day.

Ethanol alone is not going to solve the energy crisis in the United States because it is not a viable liquid fuel replacement for gasoline. There simply is not enough corn to fuel our vehicles. Last year, the United States burned approximately one-quarter of its national corn supply as fuel, which only led to a 1% reduction in the country's oil consumption. Additionally, ethanol is not as fuel-efficient as regular gasoline, and it is more expensive to produce. We must look for better, more realistic alternatives to reduce our dependence on foreign oil.

Approve the 50% waiver of ethanol mandates today!

Thank you,
