To the Honorable Stephen Johnson:

RE: Docket ID No. EPA-HQ-OAR-2008-0318

I write you today with an urgent request to regulate greenhouse gas emissions under the Clean Air Act.

With global warming being one of the greatest challenges humanity has ever faced, let America lead the way in regulating and thus reducing global warming emissions. At the federal level, the Supreme Court has affirmed the EPA has that authority to regulate global warming emissions under the Clean Air Act.

As one of, if the largest industrialized nation in the world, the United States has an obligation to not only its' citizens, but also as citizens of the world to decrease emissions and also find more sustainable earth friendly, country friendly, neighborhood friendly, people and family friendly ways to live in harmony with the environment that still supports us for now.

If we are to have a cohesive future as a country and citizens of the earth, let it start here. May we be examples for not only our future generations, but for the world at large. People are getting the message at the grassroots level by recycling, using natural cleaners, organic farming, car pooling, ect. Let us see this go all the way to the top at the Federal level. Please. Clean up our air by regulation of greenhouse gas emissions.

Sincerely,

Judy Wells
