To Whom It May Concern:

Re: **Comments for Docket I.D. No. EPA-HQ-OAR-2008-0318**

**I do not support the EPA regulation of Carbon Dioxide. The EPA should not regulate carbon dioxide under the existing Clean Air Act.**

There are three reasons why I object to this regulation:

1. The theory and science of "Manmade Global Warming" is not agreed to by all in the science community. I believe the planet warming and cooling is a natural cycle, not man induced.
2. America's competitive edge will be ruined
3. America's economy will be severely damaged.

In fact, it is my opinion that the EPA and the Environmental Extremists are largely responsible for our present economic slowdown, due to other Environmental activism and due to the objections of increasing domestic energy supply from within America's borders.

Regulation of carbon dioxide by the EPA is wrong for America, wrong for the planet and not wise for humankind.

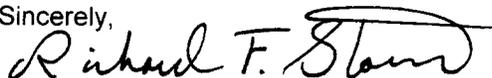

A strong America is the planet's last best hope for helping the underprivileged of the world. Regulating America's CO<sub>2</sub> will do virtually nothing to the planets total CO<sub>2</sub> anyway?

The developing world (especially India and China) is using more and more carbonaceous energy of coal, oil and gas. Regulation of America's CO<sub>2</sub> will only weaken America, not improve the world climate?

Why kill more American industries? Let's let the science work out over the next five years or so? Then take another look at CO<sub>2</sub>.

Thank you for reading and considering my comments.

Sincerely,

Richard F. Storm
