John Holzhey o GHG-Endangerment-Docket

04/17/2009 05:59 PM

I can only assume you are under advisement from the present administration to make production or release of these gases a finable or taxable offense primarily for the ability to take funds from the producers of these gases.

Since there is no concrete evidence that the climate is adversely affected by the release of these gases, I can only believe it is Government Sponsored theft.

Are you willing to fill in all the wetlands since they are the prime emitters of methane?  
Are you going to raise taxes on the producers of our food due to the fact bread production releases CO2?

The question I have is, Who will be the beneficiary of this money and how is it supposed to curtail universal and terrestrial events which have been going on for millennia?
