ERULEMAKING CONTINUES TO IMPROVE REGULATIONS.GOV FOR ACCESS TO FEDERAL REGULATIONS

WASHINGTON, D.C. – In an effort to continue innovation around the President’s vision of more effective and open government, the eRulemaking Program made additional enhancements to Regulations.gov. These improvements were in part driven by the Regulations.gov Exchange on-line forum held last year. The public can now more quickly access federal regulations, obtain summary metrics, and learn more about interacting with the web site and its web managers.

Specific site improvements include:

- a new rotating panel of images and video clips offering a preview to the latest web site changes
- a dashboard of regulatory documents housed on Regulations.gov
- a new A-Z index of rules and proposed rules categorized by topic
- instructional video-clips highlighting site functions and
- improvements to the site's homepage and search wizard.

In addition, the eRulemaking Program has re-launched their Regulations.gov Exchange on-line forum to allow the public to explore proposed new designs and features, provide comments, and engage with other site visitors and the eRulemaking Program staff. Along with the Exchange on-line forum, the homepage now has a link to the Regulations.gov Twitter page to further support visitors’ participation in Regulations.gov and their government.

Regulations.gov provides one-stop, public access to information related to current and forthcoming regulations issued by the federal government. The Environmental Protection Agency is the managing partner of the inter-agency eRulemaking Program, which operates Regulations.gov.

More information on the Web site: <http://www.regulations.gov>.
